Course, Year & Section: BSIT 4-1

Student Number: 202300197
Date: Sept. 16, 2026

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)
2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags

git init	git restore
git status	git branch
git add	git checkout / git switch
git commit	git merge
git log	git tag
git diff	git clone

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here: <https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

I DO NOT PROHIBIT the use of AI for this activity, but please declare the extent of the use.

Sample:

"The author used [Tool Name, Version] to [specific task] during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."

Or

"I have not used any AI or AI-assisted technologies to prepare this work."

Basic Linux Commands	Sample usage	
ls	ls -la	Lists files and folders. -l shows details, -a shows hidden files.
cd	cd Documents/Projects	Changes the current folder you are working in.
pwd	pwd	Prints the exact path of the folder you are currently in.
mkdir	mkdir new_project	Creates a new folder/directory.
rm	rm -r old_folder	Deletes files or folders. -r is needed to delete a folder and its contents.
cp	cp file.txt backup.txt	Copies a file from one place to another.
mv	mv file.txt ../	Moves a file or renames it.
touch	touch index.html	Creates a new empty file quickly.
cat	cat README.md	Reads and displays the text inside a file directly in the terminal.
grep	grep "error" log.txt	Searches for a specific word or pattern inside a file.
Basic Git Commands	Sample usage	
git init	git init	Turns a regular folder into a Git repository so it starts tracking changes.
git status	git status	Shows which files are modified, staged, or untracked.
git add	git add .	Saves a snapshot of your changes into the "staging area" preparing them for a commit.
git commit	git commit -m "Fix bug"	Permanently saves your staged changes to the local repository's history.
git log	git log --oneline	Shows a list of all past commits, including who did it and when.
git diff	git diff --staged	Shows the exact line-by-line differences between your working files and what's staged.
git reset	git reset HEAD~1	Undo the latest commit but leave the working directory unchanged
git branch	git branch feature-x	Lists, creates, or deletes branches in your repository.
git checkout / git switch	git switch main	Switches your current working branch. (switch is the newer, preferred command).
git merge	git merge feature-x	Combines the changes from one branch into your current active branch.
